SCHEDULE OF PRODUCTIVE LATERAL LENGTHS

Pioneer Natural Resources USA, Inc. is disbursing revenues on the horizontal wells and the properties described on the attached Oil and Gas Division Orders. Each royalty interest owner will receive payments based on their ownership interest in the individual tracts traversed by the well multiplied by the portion of production attributable to that tract. The total productive lateral length of the well (the distance from first take point to the last take point) will be measured, the productive lateral length of the well that exists beneath each individual tract will be measured ("Length of lateral in tract"), and production will be allocated to each tract based on the percentage of total productive lateral length that is under that tract ("Allocation percentage").

For example, assume a well traverses two tracts, tract A and tract B, and that you have a 1/8 royalty interest (12.5%) in tract A. Assume also that the total productive length of this well is 7,500 feet and that the productive lateral length beneath tract A is 5,000 feet. Payments to you would be based on the value of 12.5% (your RI) x 66.67% (5,000/7,500 or tract A's share) x total production sold from the well (valued in accordance with the terms of your oil and gas lease).

Below is the schedule of productive lateral lengths used to calculate your interest as shown on the enclosed Division Orders for the following wells:
